Lab Exercise #4 – Serialization *Computer Science 2334* Due by: Friday, February 26, 2010, 5:30 pm

Note on Team Work and Lab Submission:

As with most other labs in this course, you are to work on this lab in a team with at least one other person. However, because there will be no paper copy submitted for this lab, you should ensure that all team members include their names in the class comment block for each Java class.

Objectives:

- 1. To learn how to use serialization to write and read objects to and from files.
- 2. To learn how to use the writeObject() and readObject() methods of the ObjectOutputStream and ObjectInputStream classes.
- 3. To learn how to use the FileOutputStream and FileInputStream classes to deal with files as streams.
- 4. To demonstrate this knowledge by completing a series of exercises.

Instructions:

This lab exercise requires a laptop with an Internet connection. Once you have completed the exercises in this document, your team will submit it for grading.

Make sure you read this lab description and look at all of the source code posted on the class website for this lab exercise before you begin working.

For this lab the input and output filenames should be provided as command line arguments only.

Assignment:

Serialization is an important feature of Java; one that could be used in a future project. Carefully inspect how it works and the documentation comments included in the code.

1. Download the Lab4-eclipse.zip project archive from the class website. Import the project into your Eclipse workspace using the slides from Lab #2. You will submit the modified project archive when you are finished. But, before you start modifying these files, first answer Question #2.

2. **ObjectOutputStream** and **ObjectInputStream** can be used to write and read objects to and from streams. Combined with **FileOutputStream** and **FileInputStream**, we can use these classes to write and read objects to and from binary files. Which interface must be implemented by the **TeamMember** class whose objects we want to write and read? Answer this question by adding a comment in the class comment block for **TeamMember**.

3. Add the interface you chose to the declaration of the **TeamMember** class. The declaration should have the following form:

public class TeamMember implements < insert interface here >

4. Add a method with the following signature to the **TeamMember** class that writes a **TeamMember** object (in other words, an entry called a teamMember) to a file, whose name is passed in as an argument to the method.

public static void writeTeamMember (String filename, TeamMember teamMember)

The code for this method will be similar to the following:

```
FileOutputStream fileOutputStream = new FileOutputStream(filename);
ObjectOutputStream objectOutputStream = new ObjectOutputStream(fileOutputStream);
objectOutputStream.writeObject(teamMember);
objectOutputStream.close();
```

5. Add a method with the following signature to the **TeamMember** class that reads in a **TeamMember** object from the file.

public static TeamMember readTeamMember(String filename)

The code for this method will be similar to the following:

```
FileInputStream fileInputStream = new FileInputStream(filename);
ObjectInputStream objectInputStream = new ObjectInputStream(fileInputStream);
TeamMember teamMember = (TeamMember) objectInputStream.readObject();
objectInputStream.close();
return teamMember;
```

6. Add code to main in the Lab4Driver class that uses the methods writeTeamMember() and readTeamMember() to write and read a TeamMember object to and from a binary file. The code should follow the algorithm given below. Once you have written this code, test your program to ensure that it writes and reads the binary file.

- a. Create a **TeamMember** object called teamMember.
- b. Write teamMember to a file.
- c. Set teamMember to null.
- d. Print teamMember, which should be null, to the console using System.out.println().
- e. Read in the **TeamMember** object from a file and assign it to teamMember.
- f. Print teamMember to the console using System.out.println().

7. Add a new method to the Lab4Driver class that has a signature similar to that given below. (Note, you will need to modify it slightly to use generics.) This method will write an entire list of **TeamMember** objects, called roster, to an output file using **ObjectOutputStream**.

public static void writeRoster(String filename, List roster)

The method call to ObjectOutputStream should be similar to the following:

objectOutputStream.writeObject(roster);

8. Add a new method to the Lab4Driver class that has the signature given below. This method will read a complete list of TeamMember entries (i.e., an entire roster) from an input file using ObjectInputStream.

public static List readRoster(String filename)

The method call to **ObjectInputStream** should be similar to the following:

List roster = (List) objectInputStream.readObject();

9. Add code to the main method of the Lab4Driver class that uses the methods writeRoster() and readRoster() to write and read the list of TeamMember entries (i.e., an entire roster) to and from a binary file. The code should follow the algorithm given below. Once you have written this code, test your program to ensure that it writes and reads the list of items.

- a. Create a list of **TeamMember** objects called roster. See Lab #3 for how to do this.
- b. Write out roster to a file.
- c. Erase all of the elements in roster.
- d. Print roster, which should be empty, to the console using System.out.println().
- e. Read in the list from the file used in step b and assign it to roster.
- f. Print roster to the console using System.out.println().

10. Ensure that there are no warnings generated for your code. **Do not suppress warnings.** Fix your code so that warnings are not necessary. (If you can't figure out how to fix your code to avoid the cast warning on reading the **List** into roster, you may leave in that warning.)

11. Submit the **project archive** following the steps given in the **Submission Instructions** by **February 26, 5:30pm** through D2L (<u>http://earn.ou.edu</u>). Note that there is no paper copy to turn in for this lab.
